The Puerto Rico Seismic Network (PRSN) received information that this leve earthquake was reported as felt in the Western region of Puerto Rico and the Southern region of Puerto Rico, with a maximum intensity of III (Modified Mercalli Scale, MM). At the moment of generating this bulletin no damages has been reported, but given the size and location this can not be ruled out.

Based on magnitude, location and historic records the earthquake was not sufficient to generate a destructive tsunami to Puerto Rico and Virgin Islands
